

ROCKET HELPFUL TECH TIPS

Whenever small quantities are desired, gently twist the wheel only until the material becomes visible in the clear portion of the tip. Then, while holding the syringe in your fingers merely touch the end of the tip to the work area. Apply in for longer time provides larger amounts! If desired, squeeze slight on the walls of the syringe. Application with the side of the syringe tip dispenses even smaller amounts than when the tip is held vertically. Remember, slow careful 'twisting' prevents an excess extrusion of the material.
